

## ***New UK distributor for Laarmann sample preparation equipment***

Orthos Engineering, Market Harborough, Leicestershire, has been appointed UK distributor for the range of bulk solids processing and sample preparation equipment manufactured by Netherlands-based Laarmann Group. Orthos sales manager Andrew Reynolds said: “For many years Orthos have supplied the British and Irish process industries with automatic samplers from our principals Sentry Equipment and M&W Jawo Handling, but we never had anything in our line-up before to process the material collected by our samplers. Now that all changes thanks to our partnership with Laarmann, extending our scope to include not only the sampler but also the downstream equipment to prepare the samples for analysis.” To help launch the new partnership Laarmann’s mobile demonstration unit will be touring the UK during the last week of February, supported by personnel from the two companies. A range of fully operational sample preparation and laboratory equipment will be demonstrated, including a jaw crusher, cutting mill, mortar grinder, sample divider, Lab Wizz and test sieves. Appointments can be arranged by contacting Orthos and people are offered the opportunity to carry out tests on their own products.
