

High-speed FFS bagging of aggressive products

Payper of Lleida, Spain, has introduced an upgraded version of its high-capacity, extremely robustly designed ASSAC M10 FFS bagging machine for corrosive and abrasive products. Combining proven FFS (form-fill-seal) technology and newly improved features for enhanced capacity, this 2000 bags per hour average speed model is the very latest in a new generation of high-performance machines, lowering both operational and maintenance costs and also

providing state-of-the-art user friendly human/machine interface (HMI). The special stainless steel construction makes this model highly resistant and totally compatible for use with the most difficult products ever packed.
