

Water treatment contracts keep Portasilo busy

Portasilo, Huntingdon, York, UK, has in recent weeks announced two separate orders to supply mild steel bulk storage vessels to water treatment plants located in the north of England. SNF Chemicals has ordered two silos each of 25t capacity for storing polymer. They will be installed at the United Utilities waste water treatment works in Manchester. The second contract, placed by AECOM (formerly ETM), is for the supply of two 60m³ silos for storing hydrated lime, each vessel having a capacity of 30t. They will be installed at Yorkshire Water's treatment works at Acomb Landing, York.

All the silos will be fitted with a filter unit, differential pressure switch, pressure vacuum relief valve, high level indication and Rotoflo dischargers. They will be fully equipped to ensure safe filling from pressurised road tankers in compliance with latest Health and Safety Executive requirements. www.portasilo.co.uk
