

Cake-stand tray drier

In late June, Powder Systems Ltd (PSL), headquartered in Liverpool, UK, unveiled its cake-stand tray drier which is available either as a free-standing unit without containment, or located within a PSL high-containment glovebox. The company's tray driers, allowing capacities from kilograms to large-scale production, can operate in down-flow booths, clean rooms or in conjunction with PSL containment isolators. The patent-pending design of the cake-stand tray drier provides enhanced ergonomics through optimum tray size, pivot door design and front and back access.

Outside the UK, PSL operates business units in the USA, France, Czech Republic and Japan with plans currently afoot for new offices in India and South America. The company is an international manufacturer of filtration, drying and high-containment isolator systems for pharmaceutical, biopharmaceutical, chemical and laboratory industries.
