

Positive signals from last month's POWTECH

POWTECH and TechnoPharm, which took place over three days in mid-October at the customary Nuremberg venue, attracted 1005 exhibitors and 15,498 trade visitors from 70 countries, compared with 956 exhibitors and 16,490 visitors at the previous staging of the event in the spring of 2010. "Our exhibitors again summed up the events favourably and particularly stressed the quality of the visitors and the firm inquiries in many discussions", commented Claudia Hauser-Vollrath, NürnbergMesse's exhibition manager for POWTECH/TechnoPharm.

POWTECH has established itself as the leading technology forum in Europe with a global impact in the fields of powder, granule and solids technology and nanotechnology. This assessment is endorsed by Matcon of the UK, which has been a regular exhibitor for the past two decades. According to a company spokesperson, POWTECH continues to be the most focused and dedicated exhibition in Europe for powder handling and processing technology. "It was very encouraging to hear of the many exciting investments that are planned for 2012 and beyond. Matcon will continue to help stimulate these investments and deliver 'lean' manufacturing systems to its customers, providing them with a manufacturing operation which brings the benefits of increased productivity, process efficiency, flexibility and profitability." www.powtech.de; www.matconibc.com

At POWTECH 2011 the Matcon stand displayed the company's latest product developments, complemented by video material demonstrating its ability to offer a complete system approach
