

Horizontal mixer for food applications

Reimelt Henschel MischSysteme, Kassel, Germany, has developed the HMF – HorizontalMixer which has been specially designed for the food industry. It will be marketed by the company's FoodTechnologie division. The machine, available in capacities between 500 and 3500 litres, has no dead space or detachable components in the mixing zone. A large inspection hatch allows very easy cleaning in accordance with current food hygiene requirements. Its compact dimensions allow for installation even where space is restricted. Reimelt Henschel, headquartered in Rödermark/Hessen, last year became part of the Zeppelin Group. www.reimelt.com
