

Versatile and powerful cutting mill

Retsch, Haan, Germany, has extended its range of cutting mills with the introduction of the model SM 300 which combines powerful size reduction with very easy handling. Thanks to a variable speed between 700 and 3000rev/min it is suitable for many different, and also

difficult, size reduction tasks. The 3kW drive with additional fly wheel mass and a high torque ensures precise grinding results, even with heterogeneous sample mixtures. There is also easy access to the grinding chamber for cleaning. The housing is simply folded back and the push-fit rotor can be removed without tools in a matter of seconds. The device can be equipped with a wide range of accessories, including a cyclone-suction combination. www.retsch.com
