

Mobile optical sorting plant

Rhewum, Remscheid, Germany, has developed the MobiSort, a mobile optical sorting machine which is suitable for any kind of bulk material. The unit includes air compressor and drier contained within a weather-protected and sound-proofed housing. Its dimensions allow

it to be transported by road and its width complies with highway regulations. The customer needs to provide a power source as well as three conveyors (infeed, output of processed product and scrap). The plant, which is available for purchase, lease or rental, can be dismantled into portable segments in less than two hours. www.rhewum.com
