

## ***Weighfeeders can be wirelessly configured from a distance of 100m***

Schenck Process headquartered in Darmstadt, Germany, some 10 years ago introduced a new range of mechatronic weighfeeders. When coupled with the EasyServe service program this provides an advanced system that can be installed, configured and monitored by means of a laptop. These functions can now be performed remotely thanks to new Bluetooth wireless modules. The operator is able to work from a clean and comfortable location and at a safe distance, there being no longer a need for cumbersome cables. Depending on specific requirements, Schenck offers two different module range classes: Bluetooth class 1 for up to 100m and Bluetooth class 2 for up to 30m. A 2m connection cable allows the transmission path to be aligned perfectly. [www.schenckprocess.com](http://www.schenckprocess.com)
