

## ***Heavy-duty weigh-feeders with capacities up to 800t/h***

Siemens Industry Automation Division has developed the Sitrans WW300 weigh-feeder which can achieve capacities up to 800t/h, providing consistent and accurate results in the control of continuous in-line weighing and feeding applications. The ultra-sensitive load cells provide high weighing accuracy for optimising blend consistencies and accountability. The patented, virtually maintenance-free 'unibody' design offers ample room and easy accessibility. The new machine complements the WW100 low-capacity and the WW200 low-to medium-capacity Sitrans weigh-feeders, all of which come as standard with a weighbridge and speed sensor.
