

### ***Metal-detectable aerator is industry first***

Solimar Pneumatics, Minneapolis, MN, has developed what is believed to be the first ever metal-detectable fluidiser disc in response to requests from food manufacturers looking to achieve the very highest purity for their products. According to Solimar's Jeff Lucke, instances of the company's fluidiser discs contaminating product are extremely rare, but discs that have been mechanically damaged during bin cleaning, by extreme air pressures or improper installation could potentially cause a problem. The new grey metal-detectable disc joins the standard blue and white silicone versions, orange high-temperature silicone, black and white EPDM and tan neoprene models. All these aerators are compatible with food-grade materials and are FDA approved. [www.solimarpneumatics.com](http://www.solimarpneumatics.com)
