

... and Antwerp GRP silo battery is also dedicated to food

Another leading European manufacturer of GRP silos is Spiromatic of Nazareth, Belgium. Earlier this year the company successfully completed an important food storage project with GRP outdoor silos in the port of Antwerp. The customer, located in Antwerp, is one of the largest integrated logistics service providers in the world and operates over 3000 silos globally.

This food application project consists of 12 GRP outdoor silos, each with a capacity of 300m³. A wide range of food products (up to 1kg/dm³) can be stored in these vessels. Each silo has a diameter of 4.2m and a height of about 24m. The silo cluster is mounted on a 15m high steel structure, divided into several levels which provide flexibility for further handling

of the products. On top of the silos there is a platform to provide easy access for maintenance.

Spiromatic points out that an important feature of GRP silos is their excellent insulation properties and extremely smooth interior walls, essential for the storage of food products. www.spiromatic.com
