

## ***Clean system for high-temperature belt conveying of dusty materials***

Standard Industrie International, Roubaix, France, has introduced a high-temperature version of its LIFTUBE® enclosed belt conveying system. Specially designed to transport hot products at over 120°C, and with a capability to withstand short-term exposure to temperatures up to 300°C, this is believed to be the first concept to optimise the sealing properties of enclosed belt conveyors, while retaining the benefits of the standard LIFTUBE. The company has also unveiled a large-width LIFTUBE which can accommodate belt widths of 1000-1600mm.
