

Portable CIP units offer up to 100 recipes

Suncombe, Enfield, UK, has launched a new range of MobileCIP portable cleaning-in-place systems designed for aqueous, detergent and solvent cleaning of vessels, pipework, reactors, fermenters, mixers, fillers, and other process equipment. Evolved from the company's original mobile CIP systems which have been available for over 40 years, the latest models have been developed to incorporate 'lean' manufacturing principles, ensuring that waste is minimised and efficiency is maximised. They can provide up to 100 configurable recipes storing operation parameters such as duration of cleaning, temperatures, flow rates, detergent strength, etc. www.suncombe.com
