

Mobile screen changing system

Sweco of Florence, KY, a business unit of M-I LLC, has introduced the Mobile QuickChange screen changing system. Like other members of the QuickChange family, the unit reduces screen changing to a one-man operation, eliminating the need to involve maintenance crews. After removing the clamp band of the targeted deck, the Mobile QC is manoeuvred into position next to the separator. The clamping devices are locked on to the frame brackets, and by means of the hand-operated pump the frames are lifted for easy screen removal. All QC systems are designed to reduce the time needed to change screens by up to 75%. In Europe the Mobile QuickChange is available from Sweco Europe, Nivelles, Belgium.
