

Sacks emptied automatically by the pallet load

Spanish bagging and bag palletising equipment manufacturer TMI (Técnicas Mecánicas Ilerdenses) has developed an automatic de-palletiser and paper valve-bag breaker/emptier which successfully adapts technology from the company's Robosac P4 gantry palletiser. Several modules have been modified to adapt the Robosac P4 to this new application. All the operator has to do is place the loaded pallet inside the gantry by means of a forklift and all other functions are fully automatic. www.tmipal.com
