

### ***Paddle switches now with universal voltage electronics***

Shrewsbury-based UWT (UK) Ltd, subsidiary of the German parent company, reports that with immediate effect rotating paddle switches of the Rotonivo RN3000, RN6000 and RN4000 series are now available with universal voltage electronics, without need for a manual voltage selection jumper. As a result these level switches can now be used anywhere in the world, regardless of the country's input voltage system, without need for any modification of the paddle switch.

The instrument detects the input voltage present and makes the necessary adjustments automatically. Suppliers of bulk storage systems can now order one paddle switch, under one part number, to meet the requirements for all applications in all countries.
