

## ***Extended range of rotary valves***

VDL Industrial Products, Eindhoven, the Netherlands, has expanded its line of cast iron rotary valves with the introduction of two new high-capacity models. The HT 450 and HT 550 provide capacities up to 100m<sup>3</sup>/h. The company has been manufacturing rotary valves since 1969. They are widely used in dust collection systems as airlocks under dust filters and cyclones as well as for dosing powders and granulates. VDL's manufacturing facilities are also capable of producing custom-made rotary valves.

These latest valves, which employ a new design of rotor, will be shown on the VDL Industrial Products stands at SOLIDS Rotterdam and Powtech (B1011 and 6-401 respectively). Both exhibitions take place in the first half of October. [www.vdlindustrialproducts.com](http://www.vdlindustrialproducts.com)
