

## ***Load cell wins new OIML approval***

Zemic Europe, Etten-Leur, the Netherlands, reports that its BM24R load cell has been awarded the OIML (International Organisation of Legal Metrology) R60 C3, C4 and C5 approval. The cells have been granted a Y-value of 10,000 for the standard C3 approval and a Y-value up to 25,000 for a C5 approval. Approved capacities from 60kg to 60t are available. Special features of these stainless steel, low-profile load cells, which are hermetically sealed to IP68, include high corrosion protection, laser welded diaphragms and glass to metal cable entry. The BM24R is consequently suitable for most harsh wash-down and hazardous environments in food, chemical and similar process industries. ATEX classification is optional. A complete series of mounting accessories will be available in the near future. [www.zemic.nl](http://www.zemic.nl)
