

## ***Dosing screws for dextrose bagging line***

Van Beek, Drunen, the Netherlands, has manufactured two bespoke coarse/fine dosing screws for German bagging equipment manufacturer Behn + Bates which can accurately fill bags with dextrose at high speed. For fast coarse dosing both the large and the small screw are operated, but when approaching the required weight the large screw stops and the outlet valve is closed. The fine dosing screw then accurately fills the bag until the scales show that it has reached exactly the required weight. The fine dosing outlet is then also closed. The screws are finished to a very high standard and all moving parts coming into contact with the product, including welds, have an RA value of <0.8 microns.
